

ABSTRACT OF THE DISCLOSURE

The present invention relates to a method of manufacturing an airtight container and a method of manufacturing an image display apparatus. In particular, the invention discloses a method of manufacturing an airtight container, including the steps of: setting a member for defining an airtight space together with a substrate to abut on the substrate; supplying a seal bonding material to a corner portion formed by the substrate and the member or a portion to be the corner portion formed in the setting step; and forming a closed bonding line by performing airtight bonding of each of the substrate and the member with the seal bonding material by locally heating the seal bonding material to a temperature equal to or higher than a temperature that allows the airtight bonding and then curing the seal bonding material.
